

WHAT IS AN AIR COOLER?

The EcoFix Air Cooler uses a natural process called evaporative cooling to remove the incoming hot air resulting in a constant flow of fresh and cool air to keep you comfortable all day long.

Evaporative cooling happens when air moves over water, this is why the wind feels so cold when it blows in from the sea! Air coolers use less electricity than alternatives so they are eco-friendly and cost effective.

Our air coolers can cool an area of up to 40m², saving a staggering 90% on energy usage when compared to other conventional cooling methods and can be used indoors or outdoors. For more information email info@ecoservices.com or visit our website www.ecoservices.com/air-coolers.

AIR COOLER

WHY AN AIR COOLER?

- Air coolers are eco-friendly as they use a natural process of evaporation to renew stale air and also bring in refreshing cool air.
- Eco Fix Air Coolers operate much more efficiently than air conditioners or fans, as a result they are more economical to run.
- Our coolers use air ionizers purifying the air from bacteria, dust, cigarette smoke, molds, pollen and household odors. Consequently, this benefits our health and can facilitate body growth and disease prevention.
- No requirements for a hose or coolant refills means that our coolers are easy to set-up and requires extremely low maintenance, no hose or coolant refills necessary.

INDOOR

- Eco Fix Air Coolers can cool an area up to 40m² making it perfect for any room in the house, conservatory or office.
- Air coolers also recycle indoor air through cross ventilation whereas air conditioners only recycle ambient air which may increase the amount of pollutants.
- Our portable gliders means that it can be placed in any room easily.
- Stylish design and equipped with a modern touch-panel makes for easy operation of the cooler.
- Our coolers use air ionizers purifying the air from bacteria, dust, cigarette smoke, molds, pollen and household odors.

OUTDOOR

- Eco Fix Air Coolers can also be used effectively outside.
- A great cooling option to keep the summer heat at bay. Our air cooler can be used for the porch, garden or outdoor social functions.
- They are often used for horticulture with the ability to maintain cool temperatures in your greenhouse.
- Our coolers combine as an air purifier helping plants to grow. Pollutants can limit the amount of food a plant can make through the process of photosynthesis. As the air pollutants are removed from the air, this enables plants to absorb more carbon dioxide and grow faster.
